**CONSULT ORIGINAL AND SUPPLEMENTARY INSPECTION REPORTS FOR MATERIALS WITH TRACE AMOUNTS OF ASBESTOS**
September 14, 2005

Mr. Michael Weissenborn, Project Manager
Facilities Department
Chico Unified School District
1163 East 4th Street
Chico, CA 95928

Re: Bidwell Junior High School, Asbestos Abatement Work, Post Job Submittal from AFM Environmental, Inc. (AFM)

Dear Mr. Weissenborn:

AFM has submitted final documentation to Hazard Management Services (HMS, Inc.). This COMPLETE's the final close-out documentation requirements, and is ACCEPTED for this project.

I am retaining all documents submitted to me and returning to you only this confirmation letter. This and all other documentation pertaining to the project will be submitted to Chico Unified School District in whole at a later date.

Please call me if you have any questions at (916) 632-6800.

Sincerely,

Shannon Johnson
Project Manager Administrative Assistant
September 21, 2005

Mr. Michael Weissenborn
Project Manager Facilities & Development
Chico Unified School District
1163 E. Seventh Street
Chico, CA 95928

Dear Mr. Weissenborn:

This letter reports the completion of work, which impacted lead and asbestos containing building materials at Bidwell Junior High School. With this report Hazard Management Services, Inc. (HMS, Inc.) has completed all of our responsibilities under the present contract. All work was completed in accordance with the abatement specifications included with this report.

Area air samples were collected by HMS, Inc. to monitor the work practices of the abatement contractor. The analytical results of these samples indicated the work practices utilized by the contractor were generally effective in controlling emissions during the removal work. All area samples were analyzed utilizing Phase Contrast Microscopy (PCM) in accordance with the NIOSH 7400 method.

Upon completion of removal by the abatement contractor of asbestos-containing materials and prior to conducting clearance air monitoring of each containment, HMS, Inc. conducted a thorough visual inspection. HMS, Inc. verified that the contractor had completed the removal of the designated materials, and had cleaned the containment area of existing dust, debris, materials, and waste. When HMS, Inc. accepted the containment the abatement contractor was instructed to encapsulate all surfaces within each containment.

Clearance air monitoring was conducted throughout campus where asbestos was removed in accordance with the US Environmental Protection Agency (US EPA) Asbestos Hazard Emergency Response Act (AHERA) criteria, and in accordance with 40 CFR Part 763, Appendix A. Analysis of clearance air samples collected was performed by Transmission Electron Microscopy (TEM) and Phase Contrast Microscopy by Asbestos of Carmichael, CA. Please refer to the project book for exact removal and clearance locations.

HMS, Inc. collected bulk samples of various materials suspected of containing asbestos during this project. These samples were analyzed for asbestos content using Polarized Light Microscopy (PLM) and dispersion staining by Asbestos.

HMS, Inc. also conducted an XRF survey of interior and exterior architectural coatings before commencement of the project to help determine lead levels and work practices to be applied during surface preparations by contractors. No bulk samples for lead analysis were collected for this project.
A copy of all sample analysis reports and all laboratory certifications can be found in Section "V" of the close-out documents.

HMS, Inc. is including documentation provided by the contractor(s) with this report as part of the final close-out documentation, as required by the project specifications. These documents include copies of worker training certificates, medical exams, respirator fit tests, air sampling data, safety meetings, sign-in sheets, and other information that were submitted to HMS, Inc. HMS, Inc. cannot attest to the accuracy or validity of the documents provided by the contractor(s), since these were prepared by the contractor, not HMS, Inc. It is the responsibility of the contractor(s) to comply with the various regulations and provide valid, true, and accurate documents as they pertain to this project.

In order to meet the AHERA requirements, the enclosed documentation must be kept on file by the District as part of the District's US EPA AHERA Management Plan. The District must keep a copy of this report in the District Office and the appropriate school office. Be sure the District receives these documents so they can update the list of asbestos-containing building materials in the Management Plan. The District should also indicate on the "Homogeneous Material Records" (HMR) the abatement actions taken. The District should also be sure to note in the annual notifications to parents and employees that abatement work was completed at this site.

Please call me at (916) 632-6800 if you have any questions regarding this report.

Sincerely,

John A. Angi
Project Manager
Certified Asbestos Consultant
DOSH #03-3330

December 5, 2005

Mr. Michael Weissenborn, Project Manager
Facilities Department
Chico Unified School District
1163 East 4th Street
Chico, CA 95928

Dear Mr. Weissenborn:

This report presents results of asbestos inspection of Building A (Classrooms 108, 109, 208, 209, and other offices) and Building C (Classrooms 206 and 207) located at Bidwell Jr. High School by Hazard Management Services, Inc. (HMS, Inc.). The onsite work was completed between November 14 and 30, 2005, which included a review of the existing US EPA AHERA report, and a review of all building materials in the rooms that will be impacted by the planned renovation project. The inspection was very limited in scope and included only those areas within the two buildings indicated on the drawings that will be affected by the project. The inspection was conducted to comply with U.S. EPA NESHAP requirements for a pre-renovation asbestos survey.

Inspection Protocols

HMS, Inc. personnel utilized the following inspection protocols.

Asbestos

1. The interior and exterior of the two buildings were visually inspected for suspect asbestos containing building materials related to the project. Excluded from the survey were roofing samples, since you indicated the roofing systems from the two buildings had been replaced within the past 3-4 years and no major work is planned which would impact the roofing materials.

2. Representative bulk samples of each suspect material were collected using a hand tool to obtain bulk samples and then placed into sealed plastic bags. The sample locations are indicated on the sample submission chain-of-custody report, as well as, on the attached schematic.

3. HMS, Inc. did not sample specific non-suspect materials such as glass, foam, wood, metal, rubber, plastic, and concrete.

There were 28 bulk samples collected for asbestos evaluation on this investigation. The bulk samples were delivered to Asbestech laboratory of Carmichael, CA. Asbestech is approved to analyze asbestos under the National Voluntary Laboratory Accreditation Program (NVLAP). The samples were analyzed using the Polarized Light Microscopy (PLM) method. One of the drywall samples found to contain asbestos in the joint compound was subsequently analyzed by the 400 point array method for waste characterization.
Inspection Results

Asbestos

28 bulk samples were collected of materials inside of the two buildings which are considered suspect to possibly contain asbestos by the U.S. EPA. Asbestos was detected in 14 of the 28 samples collected in these areas. The following is a summary of materials found to contain asbestos by bulk sampling or by assuming them to contain asbestos in each building.

### Building A Classrooms 108, 109, 208, 209 and Small Offices

Recommendations

Asbestos

Asbestos was detected in many materials in the two buildings that will be involved in the renovation project. The results of these tests will be included in the asbestos specifications that I will be preparing for the project.

I reviewed the various classrooms and other spaces in the two buildings and find the drywall walls in Building A to be the most challenging for the asbestos abatement phase of the work. The drywall separating the classrooms (108, 109, 208, 209, and other offices) are partially or completely covered with wood paneling and the walls are relatively high. In addition, there are many items attached to the wood paneling or drywall walls that will require addressing by the specifications.

The key items attached to the wall systems include:

TV's, Speakers, Fire Alarms, Intrusion Alarms, Gas Line in Room 108, Clocks, Electrical Conduit, Supply Registers, Touch Pad Alarms, Main Electrical Service Panels, HVAC Ducts, Fire Extinguishers, Flag Mounts

Of particular note is in Classroom 208 at the south wall east of the entry door, there are main computer lines coming into the classroom at this location. According to the drawings, this area of the wall will be removed for a new door.

Be sure to include a copy of this report in the EPA AHERA report file for Bidwell Jr. High School. Our three year re-inspection reports will also make noted changes to the inspections files with bulk sample results reflected in the next inspection.

Disclaimers

The nature of the renovation or demolition work is such that materials can be uncovered which previously were unknown to exist. Therefore, HMS, Inc. cannot be responsible for "hidden materials". If suspect materials, other than those included in this investigation are discovered during the renovation/demolition, it must be assumed that the materials contain asbestos. The project should then be halted and re-evaluated.

Please call (916) 632-8800 if you have any questions.

Sincerely,

[Signature]

Richard Beall, CIH, CSP
Cal/OSHA Asbestos Certification #92-0032

*This analysis uses polarized light microscopy and dispersion staining following E.P.A. method 606R-93/116. Non-friable materials were analyzed applying the same method. The lower detection limit is <1% with the proviso that FLM may not detect fibers <0.25 microns in diameter that may be present in samples such as floor tiles. In accordance with Title 22, CCR, Section 65061.24(a)(3)(a), the MCL is 1%. Samples were not collected by Asbestech. This report must not be reproduced except in full without the approval of Asbestech. This report relates only to the items tested. This report must not be used to claim product endorsement by NVLAP, or any agency of the U.S. government. Asbestech accepts technical responsibility for this report and date of issue.*

Date Analyzed: 11/17/05

---

*The analysis uses polarized light microscopy and dispersion staining following E.P.A. Method 600.8-93/116. Non-friable materials were analyzed applying the same method. The lower detection limit is ≤1% with this proviso that fibers ≤0.25 microns in diameter that may be present in samples such as floor tiles, in accordance with Title 22, CCR, Section 65013:246(3)(a). The MCL is 1%. Samples were not collected by Asbestech. This report must not be reproduced except in full without the approval of Asbestech. This report relates only to the items tested. This report must not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. Asbestech accepts technical responsibility for this report and date of issue.*

DESTRUCTION PLAN KEYNOTES

A. EXISTING CASework TO REMAIN - PROTECT IN PLACE DURING CONSTRUCTION

B. SAW CUT AND REMOVE EXISTING CONCRETE SLAB ON GRADE FOR UTILITIES RENOVATION. DO NOT CUT (E) FLOOR CURB & FOUNDATION BELOW AT WALLS, TYP.

C. EXISTING DOOR MODIFIED IN DSA APPL #02-10576; PAINT ONLY; SEE DOOR SCHEDULE

D. (E) INTERIOR WALLS - REMOVE (E) NON-STRUCTURAL WOOD PANELS AND (E) GYP. BD. ON BOTH SIDES OF THE EXISTING WOOD STUDS, TYP.

E. REMOVE DOOR FRAME TO REMAIN; COORD. NEW DOOR HARDWARE WITH EXIT. FRAME

F. REMOVE EXISTING DOOR AND FRAME, INCLUDING SIDE LITE & TRANSOM, IF ANY, BACK TO R.O.

G. REMOVE INSTRUCTIONS WINDOW

H. EXISTING COLUMN TO REMAIN - PROTECT.

I. REMOVE EXISTING FULL HEIGHT STORAGE CABINETS, BASE CABINET, SHELVING, COUNTER TOP AND BACK SPLASH.

J. REMOVE EXISTING COUNTER TOP AND BACK SPLASH.

K. REMOVE BUILT-IN UNIT VENTILATOR CABINET & ATTACHED METAL SHELVING; SEE MECHL DWGS. FOR ADD'L REQMTS

L. REMOVE EXISTING UPPER WALL-HUNG CABINETS.

M. NOT USED.

N. REMOVE EXISTING 4" BASE; (E) FLOOR TILE REMOVED BY SEPARATE HAZMAT ABATEMENT CONTRACTOR, COORDINATE AS REQUIRED.

O. NOT USED.

P. REMOVE (E) EXTERIOR WINDOW CURTAIN TRACK AND CURTAINS IN THIS ROOM

Q. NOT USED.

R. (E) PLASTER CEILING THIS ROOM REMOVED BY SEPARATE HAZMAT ABATEMENT CONTRACTOR, COORDINATE AS REQUIRED.

S. NOT USED.

T. EXISTING STUD WALL WITH TELECOMMUNICATIONS EQUIP. TO REMAIN UNDISTURBED AND PROTECTED FROM NEW CONSTRUCTION WORK

U. REMOVE EXISTING FIXTURE, SEE PLUMBING DWGS. FOR DISPOSITION OF SERVICE LINES.

V. REMOVE (E) EYE WASH

W. REMOVE EXISTING WALL MOUNTED SPEAKERS, TELEPHONES, CLOCKS, FLAGPOLES, SOAP DISPENSERS, FIRE EXTINGUISHERS & RELATED WIRING & WIRE MOLD FOR INSTALLATION AS SHOWN ON CONSTRUCTION DWGS.

X. REMOVE (E) CHALKBOARD(S) TACKBOARD(S) AND WHITEBOARD(S) THIS ROOM, UNLESS OTHERWISE NOTED.

Y. EXISTING TOOLS & EQUIPMENT, REMOVE & DELIVER TO OWNERS ON-SITE STORAGE LOCATION OR TRANSPORTATION.

Z. REMOVE (E) WALL - COORDINATE WITH ELECTRICAL CONTRACTOR FOR CONDUITS TO REMAIN - SEE ELECTRICAL & MECHANICAL DWGS.

James Flores, Laboratory Supervisor, Hayward Laboratory

*Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.*

Analytical results and reports are generated by Forensic Analytical at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by Forensic Analytical to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by Forensic Analytical. The client is solely responsible for the use and interpretation of test results and reports requested from Forensic Analytical. This report must not be used by the client to claim product compliance by NVLAP or any other agency of the U.S. Government. Forensic Analytical is not able to assess the degree of hazard resulting from materials analyzed. Forensic Analytical reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Re: Bidwell Junior High School MPR

To Whom It May Concern:

Please test the enclosed samples from the Bidwell Junior High School MPR Closet for asbestos. We would like a 48-hour turnaround on the samples. Please fax the results to us as soon as they are available. Our fax number is (530) 891-3190.
